Project Information⁴

Weatherization is crucial to ensuring efficient heat pump operation. Please provide the following information about your project/building:

Was your building constructed or had a major renovation completed on or after 2000?			Yes	No/Unsure
Has your building received weatherization upgrades in the last 15 years?			Yes	No/Unsure
Pre-existing heating fuel type:	Oil	Propane	Natural Gas	Electric Resistance
Are you fully replacing a pre-existing heating system?			Yes	No
If partially displacing a fossil fuel system, how will the operation of the heat pump and fossil fuel systems be controlled?			Integrated control module (ICM) ⁵ Building monitoring system N/A - Fully displacing or displacing electric resistance	
ICM model number(s) if applicable:		Switchover temperature⁶ (°F):		

⁴If proposing a dual fuel RTU, manufacturer built in controls may act as the integrated control to enable supplemental heat, eliminating the need for an external control. Confirmation from the manufacturer on the sequence of operations may be requested by the Sponsor.

For each line item entry, please input the floor area heated/cooled by that equipment.

Equipment Type	AHRI Reference #	Cooling Capacity		Qty	Floor Area ⁸ [ft ²]	Rebate
		[Btu/h]	[Tons] ⁷			
ASHP	208106638	24,000	2.00	3	2,700	\$15,000
Project Cost:			Total:			

⁴The Sponsors reserve the right to contact customers with information regarding energy efficiency programs, such as weatherization incentives. More information on weatherization incentives can be found at [MassSave.com/CIWX](https://www.mass.gov/info-details/mass-save-commercial-innovation-program).

⁵Integrated control modules must be listed on Mass Save's QPL ([MassSave.com/CIHPQPL](https://www.mass.gov/info-details/mass-save-commercial-innovation-program)). Integrated control modules are not required for applications that will be fully displacing the pre-existing heating system.

⁶The "switchover temp" is the outdoor temperature below which the supplemental/pre-existing heating system will be enabled (recommended to be at or below 30° F). This must be automatically controlled using an integrated control module or with a building monitoring system. A switchover temperature is not required for applications that will be fully displacing the pre-existing heating system.

⁷Cooling tons is calculated by dividing the cooling capacity by 12,000 Btu/h.

⁸Provide total floor area covered by heat pump equipment on each line.
